THE WEEK AHEAD

January 25-29, 2010

What Goes Down Must Come Up

by Meny Grauman

The federal government's spending taps will remain wide open in 2010, but with the recession over and much of the economic data showing improvement, the day of fiscal reckoning is getting closer. Even without a wave of budgetary austerity, Ottawa's \$47 bn economic stimulus package is set to drop to zero in 2011, kicking one leg of support from under the nascent Canadian economic recovery, and giving policy makers another reason to be very cautious about how quickly they tighten the monetary reins over the next two years.

By the Bank of Canada's own estimation, the private sector will become the "sole driver" of domestic demand growth in 2011, as government spending actually weighs on GDP growth next year, after providing an important lift in both 2009 and 2010. Although Carney and company see weakness in the public sector as being more than counterbalanced by strength in trade and inventories, that is predicated on a more optimistic view of the US recovery than we are willing to concede.

According to the Bank's latest forecast US economic growth should hit 3.8% next year as the economic recovery gathers steam. That is materially different from our forecast of 2.4%, based on our conviction that after a strong start to 2010, the American economy is in store for an extended period of underperformance. Without healthy demand from our neighbour to the south, we believe that the Canadian economy will be on shakier ground than the Bank of Canada expects when the government's stimulus dollars stop flowing next year.

That has sizeable implications not just for the pace of recovery, but also the future path of interest rates. Although we continue to expect that the Bank will kick off a tightening cycle by raising rates by 75 bps in Q3, additional hikes could come much more slowly than many people assume as central bankers keep a close eye on fiscal developments both at the federal and provincial levels.

Owing to Washington's serious budgetary challenges, fiscal considerations should loom even large among the members of the FOMC. While the bulk of the US government's unprecedented \$787 bn fiscal stimulus package has yet to be spent, the impact on GDP peaked in Q3, and by our own estimate will likely start to detract from growth starting in Q4 2010. We expect the Fed to hold off on rate hikes until 2011, but even then policy makers should move cautiously as fiscal policy serves to slow growth even without the help of rate hikes.

The common perception is that once central bankers get the economic all-clear, interest rates will shoot up just as fast as they tumbled at the start of the recession. However, with government emergency spending likely to stop quite abruptly in 2011, what comes down may not go back up quite so fast.

Week Ahead's Market Call

by Meny Grauman

In the US, a busy data calendar will provide investors with a mountain of new data points, but probably very few surprises. The week kicks off with existing home sales, which should fall by close to 10% after a number of months of very strong results. Heading into the middle of the week, the FOMC rate announcement looms a little less large these days as rates are expected to remain on hold, and even the accompanying statement is unlikely to provide anything new save for a further acknowledgment of improving economic and financial market developments. We will pay particular attention to initial jobless claims, to see whether they reverse their previous spike, which the BLS attributed to a holiday-related backlog of applications. Finally, Friday brings the main data event of the week, with the release of fourth quarter advance real GDP. While the market expects a very strong print, just how strong it will be rests on the very hard to predict inventory component.

In Canada, most of the week will be data free, save for Friday when we are set to get GDP figures for the month of November. Although, the outlook for the quarter as a whole remains quite good, that will largely depend on just how strong December turns out to be, as November looks like a dud. Despite expected gains in wholesaling and a number of other service sectors like finance and real estate, weakness in manufacturing and retail should keep the monthly print to only a disappointing 0.1% gain.

Week Ahead’s Key Canadian Number:

Real GDP (at Basic Prices)—November

(Friday, 8:30 a.m.)

Krishen Rangasamy (416) 956-3219

	CIBC	Mkt	Prior
GDP m/m	0.1%	0.2%	0.2%

Canada’s tepid recovery continued in November, as weakness in manufacturing and retailing offset gains in wholesaling and other sectors. We may see strength in services such as the “Finance, Insurance and Real Estate” category helped by a booming housing market and a more stable financial environment. The H1N1 immunization program may also have provided a lift to categories such as “Public Administration” and “Professional, Scientific and Technical Services” as medical staff and drugmakers worked longer hours in November. A 0.1% GDP expansion in November will put output at a nine-month high, albeit still 4% below the peak reached in July 2008.

Forecast Implications — Our call for a 3.5% annualized expansion for Q409, which is close to the Bank of Canada’s forecast of 3.3%, looks like a stretch, given soft GDP prints for October and November. Still, a good hand-off from September as well as a strong December may have saved the quarter, especially as auto plants ramped up production and the resource sector got further enticements to raise output (from higher commodity prices) in the last month of the year. With trade and domestic demand firming up, and complemented by fiscal stimulus, we expect a strong first half, before a relapse in US demand forces Canadian growth to fizzle out in the second half of 2010.

Market Impact — We are slightly lower than consensus which could hurt the C\$ and lift bonds if our call is on the mark.

Week Ahead's Key US Number:**Real GDP—Q4 (Advance)**

(Friday, 8:30 a.m.)

Meny Grauman (416) 956-6527

	CIBC	Mkt	Prior
Real GDP (q/q annualized)	4.0%	4.5%	2.2%
GDP Deflator	1.2%	1.3%	0.4%

While there is broad-based consensus that fourth quarter real GDP growth will be strong, just how strong will depend on the notoriously difficult to forecast inventory component. Large revisions to the inventory component of growth is the main reason why third quarter real GDP came in 1.3 percentage points lower than originally forecast, leaving the door open for market disappointment in the face of steadily rising expectations.

Regarding the other pieces of the quarterly growth puzzle there is significantly more agreement, with consumer spending continuing to power ahead despite unresponsive fundamentals, such as double-digit unemployment. Government stimulus spending likely had its biggest impact on output in the third quarter, but should still add over two percentage points to growth in Q4. Meanwhile, trade is likely to be a small negative as both imports as well as exports continued to recover from their recession lows. Residential construction should also be a small positive for the second month in a row, but

business spending will still be weighed down by serious problems in the commercial real estate market.

Forecast Implications — Despite a projected jump in fourth quarter real GDP growth, which should extend into the first half of 2010, the overall pace of the nascent US economic recovery should be slower than normal. After dipping by a projected 2.5% in 2009, the US economy should expand by a modest 2.8% in 2010, even with the help of massive government spending and record low interest rates.

Market Impact — With the market increasingly expecting a blow-out GDP number for Q4, our below-consensus forecast should give a boost to Treasuries and weigh on both the US\$ dollar and cyclical equities. Whatever the market reaction, it is important to note that Friday's reported number is subject to two revisions and therefore could change materially as in Q3.

Other US Releases:**Durable Goods Orders—December**

(Thursday, 8:30 a.m.)

After a very steep decline early in the year, durable goods orders have been steadily climbing out of their recessionary trough on the back of increased demand and improving economic confidence. Although this series is quite volatile we expect the overall trend to remain positive into the first half of next year, but lose steam after that, as inventory levels stabilize and economic growth slows to a crawl. In the meantime, the outlook for December is quite positive, largely on the back of

a strong surge in aircraft orders after a 32% slide in November. While November's result was strong excluding transportation, we expect the opposite to be true this time around, with durable goods orders up 2.5% overall, but only coming in at 0.5% excluding vehicles and aircraft. Orders for nondefense capital goods excluding aircraft should moderate after climbing by 2.9% in November, but shipments of capital goods should show further strength.

Equity Insights

Peter Buchanan and Meny Grauman

Analysts Now More Optimistic About Long-Term TSX Than S&P 500 Earnings

Expectations for long-term S&P 500 earnings have fallen more of late and are below those for the TSX, reversing how things were before the financial crisis. One contributing factor may be the TSX's greater leverage to fast growing emerging markets, owing to its large stable of resource cyclicals. Historically, TSX earnings have actually borne a closer relationship to changes in the resource prices than nominal Canadian GDP. Another factor potentially is the crisis' harder body blow to the profit-rich US financial sector, and the potential for proposed policy changes to further cloud earnings prospects in that segment.

US Economy Picking Up But Not So Far Oil Demand

Oil prices gave back some of their recent gains this week. Beyond ample OPEC spare capacity, a key negative is continued subdued demand in the world's largest market, the US. The US economy may be turning around, but oil products demand there has yet to stage a convincing comeback and remains about 10% late 2007's peaks, due principally to soft demand for distillates and heavier fuels. While China's oil consumption grew by about 500,000 bbls/day last year, the drop in US oil demand from the peak is about five times that much. That's one reason we remain cautious on the near-term outlook, as reflected in our WTI estimates of \$75/bbl on average this year and \$80 in 2011.

Raising the Stakes

The recent equity sell-off has caused some to speculate that market optimism, especially in the US, may have hit unrealistic levels. Among the measures raising eyebrows is the percentage of equity analysts who have raised their fourth quarter S&P 500 earning estimates over the past month. As of December that indicator stood at 73%, a near record spike, and well beyond the typical range following recessions. With the US earnings season in full swing the bar has been ratcheted up quite substantially over the past few weeks. The good news is that with nearly 20% of companies reporting so far, 80% have actually managed to beat expectations, indicating that firms are up for the challenge.

Analysts' Expectations Head Higher for Q4

Currency Currents

Krishen Rangasamy

Inflows Lift C\$

With the bulk of the monthly data for 2009 on international securities transactions now available, a familiar picture is emerging. Like in 2008, Canadians pulled back on foreign securities, divesting from foreign bonds. At the same time, foreigners significantly ramped up their purchases of Canadian bonds and equities, lured by low inflation and optimism about commodities. Altogether, those flows partly explain the C\$’s strength in 2009. But those net capital inflows are set to translate into larger portfolio income outflows down the road, something that will eventually contribute to widening Canada’s current account deficit.

Not Just Energy

Even excluding energy and other volatile items, UK inflation ramped up in December as the dampening effects of the Dec08 VAT cut dropped out of the calculation. The upward trend is set to extend through 2010, helped by the January VAT increase and higher import prices from past sterling weakness. The latest BoE meeting minutes raised further concerns as the Bank acknowledged that pass-through of the VAT increase in January “might be somewhat greater than previously assumed”. That does not necessarily translate into higher interest rates right away given the still-weak economic conditions in Britain. But the now-enhanced probability of a QE wind-down, coupled with ongoing problems on the old continent, should allow sterling to continue to outperform the euro over the near-to-medium term.

From First to Last

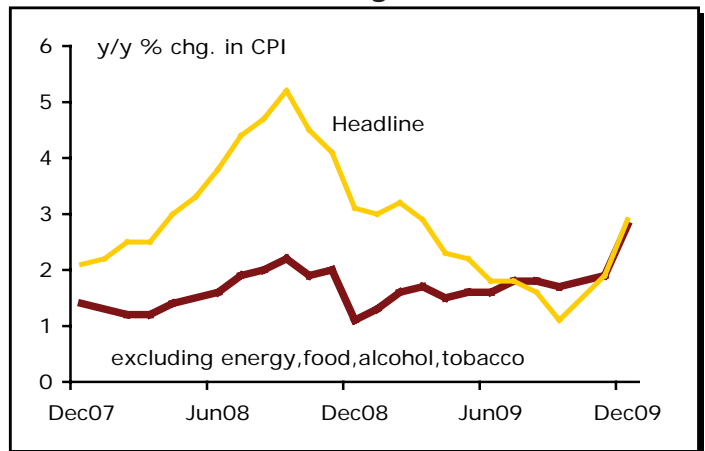

After topping currency charts last year, the real started 2010 on the wrong foot, stumbling nearly 4% so far in January. Markets are now paying attention to the current account deficits that have been accumulating in recent months. While net outflows of corporate remittances and strong domestic demand relative to the external demand are to blame for the deterioration in the current account, the external imbalance is also a reflection of an overvalued real. That, however, doesn’t necessarily presage a collapse of the real in 2010. The 12-month cumulative current account deficit of US\$24 bn amounts to only 1.6% of GDP, much more manageable than say Canada or Australia.

Foreigners Amass Canadian Financial Assets While Canadians Shun Foreign Securities

All data seasonally adjusted except where noted "NSA". M: per cent change from previous month. Q: per cent change from previous quarter at annual rates. Y: per cent change from year earlier. AR: Annual Rate. YTD: Year to date. Release dates are provided by sources outside CIBC World Markets inc. Dates are subject to change. Sources for historical data: U.S. Department of Commerce, U.S. Department of Labor and U.S. Federal Reserve Board.

Conflicts of Interest: CIBC World Markets' analysts and economists are compensated from revenues generated by various CIBC World Markets businesses, including CIBC World Markets' Investment Banking Department. CIBC World Markets may have a long or short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should not rely solely on this report in evaluating whether or not to buy or sell the securities of the subject company.

Legal Matters: This report is issued and approved for distribution by (i) in Canada by CIBC World Markets Inc., a member of the IIROC and CIPF, (ii) in the UK, CIBC World Markets plc, which is regulated by the FSA, and (iii) in Australia, CIBC World Markets Australia Limited, a member of the Australian Stock Exchange and regulated by the ASIC (collectively, "CIBC World Markets"). This report is distributed in the United States by CIBC World Markets Inc. and has not been reviewed or approved by CIBC World Markets Corp., a member of the New York Stock Exchange ("NYSE"), NASD and SIPC. This report is intended for distribution in the United States only to Major Institutional Investors (as such term is defined in SEC 15a-6 and Section 15 of the Securities Exchange Act of 1934, as amended) and is not intended for the use of any person or entity that is not a major institutional investor. Major Institutional Investors receiving this report should effect transactions in securities discussed in the report through CIBC World Markets Corp. This report is provided, for informational purposes only, to institutional investor and retail clients of CIBC World Markets in Canada, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. This document and any of the products and information contained herein are not intended for the use of private investors in the United Kingdom. Such investors will not be able to enter into agreements or purchase products mentioned herein from CIBC World Markets plc. The comments and views expressed in this document are meant for the general interests of clients of CIBC World Markets Australia Limited.

This report does not take into account the investment objectives, financial situation or specific needs of any particular client of CIBC World Markets Inc. Before making an investment decision on the basis of any information contained in this report, the recipient should consider whether such information is appropriate given the recipient's particular investment needs, objectives and financial circumstances. CIBC World Markets Inc. suggests that, prior to acting on any information contained herein, you contact one of our client advisers in your jurisdiction to discuss your particular circumstances. Since the levels and bases of taxation can change, any reference in this report to the impact of taxation should not be construed as offering tax advice; as with any transaction having potential tax implications, clients should consult with their own tax advisors. Past performance is not a guarantee of future results.

The information and any statistical data contained herein were obtained from sources that we believe to be reliable, but we do not represent that they are accurate or complete, and they should not be relied upon as such. All estimates and opinions expressed herein constitute judgements as of the date of this report and are subject to change without notice.

Although each company issuing this report is a wholly owned subsidiary of Canadian Imperial Bank of Commerce ("CIBC"), each is solely responsible for its contractual obligations and commitments, and any securities products offered or recommended to or purchased or sold in any client accounts (i) will not be insured by the Federal Deposit Insurance Corporation ("FDIC"), the Canada Deposit Insurance Corporation or other similar deposit insurance, (ii) will not be deposits or other obligations of CIBC, (iii) will not be endorsed or guaranteed by CIBC, and (iv) will be subject to investment risks, including possible loss of the principal invested. The CIBC trademark is used under license.

(c) 2009 CIBC World Markets Inc. All rights reserved. Unauthorized use, distribution, duplication or disclosure without the prior written permission of CIBC World Markets Inc. is prohibited by law and may result in prosecution.
